GUARDIAN : SYSTEMS

Specialist Cameras

Specialist cameras for specific situations...

Detect and identify objects using passive thermal imaging or active burst illumination laser cameras in total darkness. Useful for security applications, search and rescue operations or port operations.

High zoom (x60) camera can identify objects - optically – at up to 3Km. High zoom with filtering improves visibility in poor conditions – fog, mist, heavy rain, snow...etc.

High Zoom x60 Optical Camera with Filtering for Improved Visibility in Poor Conditions

ARGC 2400

- Read license plate at up to 1.2 km
- Recognize a human being at 5 km
- Classify a vessel at 10 km
- Pinpoint people in search and rescue activities at a distance greater than 10 km

MIC 440 Dual Optics

- User-switchable (single) or simultaneous (dual) thermal/optical video output
- Human detection range up to 1500 m Robust design rated to an industry-leading IP68/NEMA 6P/IK10

DR60 x60 Zoom

- Navigating in poor visibility is dangerous and often restricts ship movements for safety; especially in confined waters such as rivers, canals, traffic separation zones...etc. The Fujinon D60
- "visible cut" filters that dramatically improve visibility in fog and mist conditions.
- IR filters improve vision during night operations.

*Improve object detection during
search and rescue operations*
